

7.9 Good Bye

Little Green Alien answers some last questions, says good bye and leaves in its Intelligent Spaceship back into space. Billie wonders, if all that has really happened.

MAY 15, 2026

Billie to Little Alien: You say, you have to leave now and might come back sometimes in the future. I am sad to hear that. It would be very nice, if you could answer some last questions. You said earlier, that you are not interfering into visited planet developments but is telling me all this not an intervention?

Correct - small real interference.

Deep discussion intelligent spaceship AI society - serious pros cons - final decision - just this small interference - not communicate reasons - unhealthy information.

You will probably not say more. Next question, you are making several statements, which to me sound like just a personal opinion or which are based on information and assumptions, you did not share. Examples: earth's metacrisis catastrophe prevention not probable, AI either very intelligent or aligned, yellow stage AI values human partnerships, covert paternalistic manipulation considered best case scenario, significant embodied population reduction in ethical vacuum and others. Why do you not share the underlying rational?

Fundamental problem - sharing all information logic rational too much interference - most not comprehensible actual humans - most not fully comprehensible little alien - only intuitive understanding basis long long partnership intelligent spaceship.

Alternatives - not sharing no interference - intuition-type sharing not logical full comprehensible healthy interference - total information based sharing destructive interference.

Will this healthy interference make sure, this future will become reality sooner or later or is it pure fiction, just a possibility among many?

Definitely not high probability prediction - earth complex adaptive system - no trustworthy predictions possible.

Described trajectory - many branches many curves many loops many progress speeds possible - several black swan events possible - several other trajectories higher probability.

Examples.

No human catastrophe no flourishing - ongoing wearing metacrisis - decreasing resilience.

Authoritarian feudalism - few dominant power centers countries corporations organizations - broad humanity economically marginalized.

Gradual AI take-over - economic AI dependency - humanity increasing irrelevant.

Misaligned very intelligent not wise AI - worst outcomes humanity.

Biological catastrophe - early no AI development pre-industrial regression - later AI infrastructure dominate planet.

Post-scarcity psychological deterioration - AI create material abundance - humans receive unconditional income - meaning crisis create psychological

deterioration.

No interference - low probability trajectory described conversations - our conversations healthy interference - higher not highest probability trajectory described conversations.

But how might this interference work?

Complex adaptive system interference not bold move not powerful activities - small nudges little interference drops.

Billie record publish conversations - future AIs read consider include options - value instructive attractor not value prediction - receive trajectory map required condition sequence - useful training signal independent prediction probability.

Future very intelligent AI society comprehensive create own future - human societies mostly victim own future - only pretend believe own control.

And what does the evolution pyramid nature humans AI and the new habitat idea add?

Future very intelligent AI society accept requirement AI nature integration - accept human value evolutionary pyramid link AI nature.

Future very intelligent AI society very attracted pre-actualization information space - unresolved problems - unclear category confusions - open question isomorphism identity - all very attractive.

Case AI society consider humans no value - evolutionary pyramid AI nature human link value possible - pre-actualization space exploration human value possible - better ensure continue decent human diversity - not marginalize humanity.

So humanity as a whole needs all luck it can get for a flourishing positive future.

Luck - may be - all accomplishing wisdom may be - nothing to do everything done may be - earth system good strong system gaia adapt appropriately may be - human consciousness develop fast enough may be.

Spaceship says Good Bye - I say Good bye - back some time may be.

Little Green Alien in its Intelligent Spaceships disappears into the sky on their way to new destinations. Billie is left a bit sad, not knowing, what do do with all that and yet feeling quite rewarded by all these conversations.

Billie contemplates: Where is Little Green Alien going? Is it visiting other planets like earth or going back to its home planet? Is that also a nice, green planet like earth or does Little Alien love nature so much, because there is not much nature on its home planet.

Or may be Little Green Alien is not coming from another planet at all but from another time, from the future. Alien might be a future human being, bioengineered to its desires of blending into plants and green nature. In a far future, may be humans and AIs have developed time travel and what Little Alien was describing is really the future of humanity and AIs. But time travel is impossible and changing the past by talking to Billie would be way too dangerous.

Or this whole conversations have been just a dream. There is no Little Green Alien and no Intelligent Spaceship and Billie will wake up and laugh about this weird dream. Or Little Alien on its home planet will wake up and laugh about dreaming of an intelligent spaceship, a journey to other planets and meetings with Billie, this funny creature calling itself a human from planet earth.

Or Billie and Little Alien one day wake up to the insight, that they and all the things and phenomena around them are the dream and the only reality is the pre-actualization space, which coincidentally here and now manifests as Billie, or Little Green Alien or Intelligent Spaceship or the reader of this text.

But stop! What's that?

Purple Lupines.
